

Cavities are nearly
100%
preventable

Protect your baby's smile before they can even say "hello"

Cavities are nearly 100% preventable. Your child should visit the dentist by age 1 or within six months after the first tooth comes in.

Visiting the dentist by age 1 helps you:

Know the dentist

and who to call if
your child has an
emergency.

Learn how to prevent cavities

that can cause your
child pain and serious
health problems.

Save money

by learning healthy
habits and catching
problems early.

Healthy mouths are important — even for babies and young children.
